Sketching a logo in Photoshop Adobe Photoshop has been one of the two most popular tools used by professional web designers. The other is Adobe Fireworks, which is a vector-based program that works as a drawing or design tool. ## Adobe Fireworks Adobe Fireworks, a vector-based app, has quickly become one of the most powerful tools available for graphic designers and web developers. It was originally designed as a tool for graphic designers to create visual presentations and layouts for magazines and advertisements. Fireworks has been frequently referred to as Adobe Illustrator's (see Chapter 6) baby sister. Because Fireworks is a tool for vector-based design, vector images work with Fireworks automatically. All elements are defined by lines that can be connected, moved, rotated, and magnified. Fireworks, like Photoshop, has many layers that enable it to create multiple images in one project. Each layer has a background fill and transparency setting. Flat designs are the primary type of design expected from a Fireworks file, although several 3D templates are available. Only a basic introduction to Fireworks is provided in this chapter; a more detailed presentation of the program can be found on Adobe's official website.

Today, I'll be reviewing the Suntor PS23 battery pack. The PS23 is one of the original battery packs from Suntor that is still on the market. It is available for less than \$50, so even after a hefty discount, it is quite cheap. This isn't a full range review, just a few thoughts. This review is made up of two different kinds of batteries: Review of the Suntor PS23 battery pack and a look at the benefits of the PS23 over some of the other battery packs available. The Suntor PS23 battery packs are good battery packs for a lot of purposes. As a reference, I have seen an EVGA battery pack for sale for over \$200. However, the PS23 that I have is still a very nice battery pack and the Suntor brand is well worth the money. Specs: 2,000mAh Capacity 12V @ 16-27A Temperature Range 0-150C Manufacturer Suntor Details The Suntor PS23 battery pack comes in a standard hard case. The hard case is not really necessary and could be cut down on. However, it does offer a little bit of protection. The Suntor PS23 battery pack is approved for use in the US, EU, and Japan. As for the EPA voltage ratings, we don't really know. The battery pack is made entirely in the USA and as such, it is assembled in America as well. This means you know that you are getting a good quality battery pack. Cases for smaller power packs are usually very flimsy. The Suntor PS23 does come with a thick hard case with stainless steel locking tabs and a rubberized handle. In the picture below, you can see the case and handle of the Suntor PS23 battery pack. This case is perfect for any situation where you need a thick battery pack, something you want to protect, or maybe just something to bring along on a long hike. On the back of the battery pack is the USB-C connection. It is on the right side of the back of the pack. On the left side of the back, we have the charger indicator LED. The Suntor PS23 battery pack is a normal 13.5mm by 20mm
